Let the complex-valued function f be defined in an open subset of C containing the point z_0 . Then f is differentiable in the complex sense at z_0 if and only if there is a complex number c such that the function $R(z) = f(z) - f(z_0) - c(z - z_0)$ satisfies $\lim_{z \rightarrow z_0} R(z) = 0$, in which case $f'(z_0) = c$.

Sarason's work played a major role in the modern development of function theory on the unit circle in the complex plane. In Sarason he showed that $\infty +$ is a closed subalgebra of ∞ . Sarason's paper called attention to outstanding open questions concerning algebras of functions on the unit circle.

Complex Analysis, or the Theory of Functions of a Complex Variable, is a central topic in analysis at an advanced level. It is analogous to real analysis, but also quite different from real analysis, because complex differentiable functions are much more special than real differentiable functions.
