## **Trigonometry Questions and Answers | Study.com**

$\sin^{-1}(x) = A$ .  $\cos B = y$ .  $\cos^{-1}(y) = B$ .  
 $\tan C = z$ .  $\tan^{-1}(z) = C$ . The regular trig functions give us side lengths when we plug in an angle, so the inverse trig functions do the opposite: when we plug in a side length (like  $x$ ,  $y$ , or  $z$ ), we'll get an angle as our answer ( $A$ ,  $B$ , or  $C$ ).
